Sungduck Lee (LA&ARCH)

DSNS546: 6 SCH open to graduate and advanced level undergraduate students in Arch; LA; CRP

Urban Design Competition Studio
This studio aims to examine the complexity of urban design practice by participating student urban design competitions. This course introduces students to fundamental urban design skills and how to position their urban design strategies within socio-cultural, economic, morphological, and functional context. The first two weeks of the semester will be dedicated to design preparation and submission for the Urban Land Institute’s (ULI) Gerald D. Hines Student Urban Design Competition. This Urban Design Competition offers students (M. Arch, MLA, MCRP, MBA and fifth-year B.Arch. or BLA students) the opportunity to form their own multidisciplinary teams and participate in a real-world design challenge. The ULI Gerald D. Hines Student Urban Design Competition is part of the Institute’s ongoing effort to raise interest among young people in creating better communities, improving development patterns, and increasing awareness for innovative multidisciplinary solutions to design challenges (http://uli.org/programs/awards-competitions/hines-student-design-competition/). Students will also have opportunity to participate in other urban design competitions that will challenge students to devise a comprehensive design and development program for a large-scale site.
