KOMPACT

Kompact is a multi-functional compact desk that grows with you. The goal of this project is to make a high quality IKEA style desk that you can either pick-up as a package, or pick-up different parts of the desk as you need it. There are three main components of the desk. The first is an expanding desk designed around dorm living, the second is a storage and charging component, and the final is a light table/drafting table insert. If I were to expand on this idea post graduation I will add different desk attachments for different careers/hobbies.
